+ + + + + Overwhelming response at the SPS/IPC/DRIVES + + + + +

During the first two days, the participation in the SPS exhibition in Nuremberg, Germany, has already proven successful. Our sales team reports great positive response from the visitors.

The number of visitors at our booth is significantly higher than in 2008; on the first day alone we recorded an increase of 50%. We have been anticipating many visitors, but this result exceeds our expectations. The main interest this year focuses on our modular connector system CombiTac. Thanks to its modularity, it offers a broad variety of possible configurations, ideally adaptable to the particular customer requirements for various different applications. The CombiTac takes 5000 mating cycles, depending on the configuration even considerably more. We are looking forward to the detailed evaluation of the exhibition contacts and the resulting prospects.
